

ABSTRACT OF THE DISCLOSURE

1
2 An anti-vandal door lock apparatus in which a cylinder lock such as a mortise
3 lock cylinder is employed for unlatching a cylindrical lock assembly. In a preferred
4 embodiment, the mortise lock cylinder is mounted to the outside of a door trim such as
5 a pull plate, with the cylindrical lock mounted to the inside of the trim, and the pull
6 plate is mounted to the door, in such manner as to effect an anti-vandal door lock
7 assembly. Preferred embodiments may include a hold-back feature, as well as a feature
8 for facilitating secured removal of the mortise lock cylinder as for re-keying.
